* Indicates required question

Team role split

In this section, explain how the work will be divided across team members.

The role split should be realistic and fair.

Each member should have a meaningful responsibility.

For mixed teams, please make the division between:

- CS work,
- AI work,
- and cloud/deployment work

as clear as possible.

Proposed role split across team members (Very Important). *

Assign a primary responsibility to each member.

Member 1 (Identity & Dashboard Lead): Responsible for the Auth microservice (JWT/OAuth), role-based access control, and building the foundational React.js framework for the staff dashboards.

Member 2 (Inventory Manager): Responsible for the Inventory microservice, managing catalog CRUD operations, tracking real-time stock levels, and ensuring database locks during high-traffic updates.

Member 3 (Order Processing Lead): Responsible for the Orders microservice, managing the lifecycle of incoming/outgoing orders, and ensuring strict API validation against the Inventory service.

Member 4 (Warehouse Movement Specialist): Responsible for the internal logistics microservice, mapping physical warehouse zones, and tracking item movements within the facility.

Member 5 (Shipment & Routing Lead): Responsible for the external logistics microservice, managing dispatch statuses, carrier handoffs, and generating shipping data.

Member 6 (Cloud & Observability Architect): Dedicated entirely to DevOps and deployment. Responsible for Dockerizing all services, building GitHub Actions CI/CD pipelines, provisioning AWS infrastructure, and setting up the centralized Prometheus/Grafana logging system

For mixed teams: how are CS, AI, and Cloud responsibilities divided?

Optional but required for mixed teams

Your answer

Who will act as integration lead? *

Member 3 (Order Processing Lead)
