* Indicates required question

Team type and course mapping

In this section, identify your team type and the courses that this project is intended to serve.

This is important because the approval criteria differ depending on whether the team is:

- CS-only,
- AI-only,
- or mixed.

You must clearly explain how the project maps to the selected courses.

Course mapping should be meaningful and specific, not just a list of course names.

This is critical because the expectations differ for CS-only, AI-only, and mixed teams. Remember that Cloud Computing is the main course that the project should serve.

Team type *

- ☒ CS-only team
- ☐ AI-only team
- ☐ Mixed CS/AI team

Which courses does this project aim to serve? *

- ☒ Cloud Computing
- ☒ Software Engineering 2
- ☐ Network Security
- ☐ Computer Graphics
- ☐ Compiler Project
- ☐ Computer Vision
- ☐ Natural Language Understanding
- ☐ Speech Processing
- ☐ Evolutionary Algorithms
- ☐ Other: _____

Briefly explain the course mapping *

State what each selected course contributes to this project.

Example:

- SE2: system architecture, APIs, Docker, SRS, UML
- NLU: fine-tuned LLM for extraction/summarization
- Cloud: deployment, storage, monitoring, security

Software Engineering 2: microservice architecture, API contracts, system design, authorization roles, workflow lifecycles

Cloud Computing: Dockerization, CI/CD pipelines, system observability (logging/monitoring), cloud storage, scaling assumptions
