The name, email, and photo associated with your Google account will be recorded when you upload files and submit this form

* Indicates required question

Existing/Approved idea details

Complete this section only if your team is choosing an idea directly from the approved project bank.

You should still describe your intended version of the project clearly, especially if you are narrowing the scope or making small adjustments.

Choosing an approved idea does not remove the need for:

- clear scope,
- course mapping,
- and a realistic implementation plan.

Project bank category *

- ☒ CS-only list
- ☐ AI-only list
- ☐ Mixed-team list

Selected project title from the bank *

3. Logistics and Warehouse Operations Platform (CS-Only) ▼

Are you using the idea exactly as approved, or narrowing its scope? *

- ☒ Exactly as approved
- ☐ Narrowed version of the approved idea
- ☐ Minor variation only

Briefly state your project version and scope *

We are implementing the Logistics and Warehouse Operations Platform exactly as approved, focusing on a clean microservice architecture. Our scope encompasses six core modules: Identity/Auth, Inventory Management, Order Processing, Warehouse Movement, Shipment Tracking, and Reporting. A primary focus will be our cloud deployment story—we will implement a zero lock-in infrastructure utilizing Docker, automated CI/CD pipelines, and full system observability (logging and monitoring). To ensure strict boundaries between the six modules. Per the project bank guidelines, we are strictly excluding machine learning and dynamic route optimization to focus entirely on robust business operations and system scalability.
