* Indicates required question

Supervisor approval support fields

Use this section to make a concise case for why your idea should be approved.

Your justification should refer to:

- clarity,
- feasibility,
- technical depth,
- course relevance,
- and demo potential.

A strong justification helps the supervisor review your proposal more efficiently.

Why should this idea be approved? *

Give a concise justification using scope, technical depth, course alignment, and feasibility.

This project is exceptionally well-suited for direct approval due to its strict alignment with the approved project bank and its realistic, engineering-first scope.

Scope & Feasibility: By strictly excluding scope-creep features like ML recommendations and dynamic routing, we have boxed the project into a highly feasible 6-module architecture. The division of labor is perfectly balanced, with five members dedicated to software engineering (APIs, state management) and one entirely dedicated to cloud infrastructure (DevOps).

Technical Depth: The project goes beyond standard CRUD by tackling distributed state management, specifically handling database locks and transaction integrity between the Order and Inventory microservices.

Course Alignment: It serves as a perfect capstone for Software Engineering 2 (via contract-first API design, UML workflow lifecycles, and microservice boundaries) and Cloud Computing (via Dockerization, zero lock-in CI/CD pipelines, and centralized Prometheus/Grafana observability).

Does the team believe this project is ready for direct approval or may need revision? *

- ☐ Ready for approval
- ☒ May need minor revision
- ☐ Likely needs discussion with supervisor

Upload supporting document (optional but recommended)

Suggested uploads:

- 1-page concept note
- architecture sketch
- dataset/source list
- preliminary SRS summary

Upload up to 5 supported files: PDF, document, image, presentation, or spreadsheet. Max 100 MB per file.
